Access Control Systems

San Diego, CA
October
 2nd or 3rd
 \$175

Who Should Attend

- **FIREFIGHTERS**

Learn how to access apartment buildings where there is no KNOXBOX

- **POLICE OFFICERS**

Welfare check? Search warrant? Make rapid access without picking the lock

- **SWAT/SED**

Control access to a building. Open or lock doors on command.

- **VULNERABILITY ASSESSMENT**

TEAMS

Learn the vulnerabilities of modern Access Control Systems

KNOWLEDGE AND SKILLS FOR PROFESSIONALS

This one-day course will teach firefighters, law enforcement officers, Special Operations forces and Federal employees how to gain access to controlled buildings. The student will be able to immediately recognize vulnerabilities in existing hardware and make the right choice for entry. The course focuses on non-destructive techniques. You will walk away with the skills and knowledge necessary to bypass many of the Access Control Systems used in North America today.

This course will cover:

- Picking disk tumbler locks
 - Picking tubular locks
 - Bypassing Request-To-Exit systems
 - Bypassing door hardware
 - Rapid access by electronic means
 - Leveraging Access Control Systems for your particular operation
 - Gaining access to control units
 - Hands-on with systems in the classroom
 - Hands-on practice with systems in the field (multiple locations)
- Included in the price of the course is a comprehensive set of tools.
